CS 495 Fifth Iteration Presentation

Hunter Wallace, Chase Watkins, Luke Holliday, Nathaniel Barber

Client Information

- Accutech
  - Accutech is a local financial software company offering a variety of services to manage portfolios, notify stock prices, and assist in company financing and bookkeeping

- Trey Gourley - Lead Architect at Accutech
- Dave Jones - IT Team Leader

Client Feedback

- Appreciated open-endedness of the software and how they can develop future health check apis
- History page is useful for analyzing calls and pinpointing issues
- Liked the usability of the adding and editing pages. Seemed to be more user friendly than before
- Would have liked to see information on mailgun and twilio be able to be integrated, but the set up for it is still looking good
- The reach of the frontend is great and the back end seems to be very clean as well

Client Software Usage

- User was easily able to understand the flow of the software and add task checks
- Editing tasks is fantastic for changing criteria to meet certain goals
- Being able to join multiple groups will greatly assist in making sure the proper people are notified when a failure occurs
- Only true lacking piece was not being able to show mailgun and twilio integration
- A few executives were not sure on the usages on the hangfire menu, but this was something required from the team for integration with other products

Mentor Feedback

- Lots of the new additions really cleaned up a lot of the issues that could pop up from adding and editing tasks.
- The database set up for the users nicely done and good to be used when other actions would want to be taken in adding capabilities of notifications
- Overall the project was a big jump up from what it used to be, and so many of the features work so nicely for what they are needed for

Mentor Software Usage

- Liked the instantaneous nature of the cron string generation
- Liked the ability to notify groups at a time from when a task is being set up
- Still really enjoyed the API fields being shown when an URL is entered
- Major piece that was lacking was being integrate the notification system
- Had no major issues when going through the software

Teamwork

- Chase
  -
- Nathaniel
  - Cron String Generation
- Hunter
  - Tests
- Luke
  -
